GENERAL INFORMATION

Introduction

Today, most Internet users prefer to purchase goods online. It is always profitable (because of the lack of retail outlets), it is convenient (the user can make purchases at any time and choose a convenient method of obtaining).

However, there is always a great risk of encountering an unscrupulous seller or fraudster making purchases on the Internet. To save your money and nerves, buying online, we propose to use the system of smart contracts.

Our platform is beneficial for all parties involved: the seller is guaranteed to receive an advance payment, the buyer minimizes risks in case of cancellation of the transaction or fraud.

Calculate crypto currency is now safe, AxTrust is a global decentralized platform for making secure transactions for crypto currency using smart contracts.

- We provide users with everything they need: more than 10 types of smart contracts, other types of transaction taking into account the type of transaction, checking the reputation of the seller, legal support, resolving disputes.
- The AxTrust platform and all projects using the integration of our API form a system that is supported by our currency. TRU can be used both for making a transaction and for solving disputable issues.
- The platform uses a system of decentralized independent voting to resolve disputes between users of the system.
- Each smart contract has an arbitration clause, and we are always ready to prepare documents for you for transfer to international arbitration.

Доверие - это аксиома

Our mission is to create an environment for safe transactions, so that any user can pay for goods and services with crypto currency and be sure that all agreements will be observed.

The official launch of the platform will take place in August 2018.

Observance of legal aspects

We conducted legal due diligence to ensure that AxTrust meets the new legal requirements for the Initial Offer of Coins at the ICO stage.

The AxTrust project focuses on the legislative regulation of ICOs, digital tokens and crypto currency transactions to provide users with safe and reliable solutions for performing secure transactions for crypto currency using smart contracts.

Market problems

Until 2010, Internet purchases were of a solid nature, people bought rare items that they could not buy offline. Now on the Internet you can buy everything, up to food and essential goods. Users are increasingly looking for profitable offers on the Internet. Along with large online stores there are many small, focused on a narrow specialized niche. In such stores, they often make more profitable offers for the buyer, but they do not inspire confidence.

Freelancer services are often much more profitable, in comparison with the price list of companies. But many will choose in favor of the company, because they want to get guarantees.

Доверие - это аксиома

Solution: AxTrust

AxTrust platform is a global decentralized platform for performing secure transactions for crypto currency using smart contracts - a comprehensive solution for protecting any type of online transactions!

Features of tools:

- purchase / sale of goods;
- service agreement;
- large transactions with phased payments;
- international legal protection of the interests of the parties;
- Conducting online transactions with the possibility of arbitration;
- ensuring security when conducting online transactions using the TRU crypto currency, which is used for domestic payments.

The decision of disputable situations

In the event of a controversial situation, active users of the platform receive an alert, and 10 of them (random) vote for possible solutions and which of the parties to the law, and which violated the agreement. Thus, the settlement of the problem is achieved, by the decision of unbiased persons, voting takes place independently by each user, thus eliminating the moment of taking a group decision. All information is public. This solution of disputable situations is applicable for simple trading operations, purchase of consumer goods, one-time payment for services, etc.

In case you make a major transaction or conclude a contract with a phased payment, AxTrust has a special offer for you!

AxTrust in smart contracts establishes a definition of the law to be applied by international commercial arbitration.

Доверие - это аксиома

The AxTrust smart contract is additionally protected by the Arbitration Agreement - it is an agreement of the parties to transfer to arbitration all or certain disputes that have arisen or may arise between them in connection with any particular legal relationship, whether it was of a contractual nature or not.

The arbitration agreement can be concluded in the form of an arbitration clause in the contract or in the form of a separate agreement.

AxTrust contributes to the added security of client operations. For our clients by agreement we will prepare the necessary documents in accordance with the requirements of the International Commercial Arbitration Courts.

Universalism

The AxTrust platform offers three options for user interaction:

- own web platform, for a detailed description of the transaction and full control over its execution;
- mobile application, a simplified system for making safe transactions in several touches;
- API, for the integration of secure transactions on third-party sites.

Each of these options will be developed taking into account the needs of users. The API will contain a set of universal smart contracts, user input is minimized, the smart contract works in fully automatic mode. Whereas web-the platform solves more complex tasks and provides the user with the opportunity to create their own unique smart contract from ready-made blocks, for a detailed description of the terms of the transaction.

Доверие - это аксиома

Financial benefits

We are sure that the TRU crypto currency will not only grow with time, but will also be accepted for payment on the AxTrust platform itself. Liquidity and utility of the TRU will be provided by the possibility of payment for various services, but also with our partners.

The owner of TRU will be able to use a secure transaction to create a unique transaction for him.

axTRUst

The TRU digital token is a virtual currency that is used to pay a commission when making a secure transaction, to create a unique smart contract for your business, as well as to pay consultants and legal support for the transaction and other internal payments within AxTrust infrastructure.

A total of 800 million TRUs were created, including: 21428571 TRU for preICO and 600 million for ICO. Another 100 million were created and distributed among AxTrust founders, and the rest were created for consultants, lotteries, investors and PR campaigns. TRU are not produced by users or other companies.

Доверие - это аксиома

TRU emission

Users purchase tokens at the ico, exchange, application or project site, use them to activate the smart contract and launch the chain of actions that it provides. Tokens are returned to the project and sold again.

The release of 800 million tokens will close the need for society in the tool for conducting transactions using smart contracts. The increase in the price on the exchange will make it possible for investors and market players to earn money, but will not affect the users of the service, as the price of the service will be dynamically adjusted

AxTrust approved

This term refers to a system that consists of projects that accept TRUs or use an integration system for safe transactions. The more companies participate in AxTrust approved, the more liquid and demand the currency of TRU becomes and its value is constantly growing.

Economic platform system

AxTrust is a platform that unites users from all over the world, using crypto currency as a way of mutual settlements. Payment of minimum commissions will allow to keep the benefit of the transaction to all participants, as well as to give additional guarantees and to protect users from fraud.

Доверие - это аксиома

Ideology

It is very important that the relationship between the buyer and the seller, between the customer and the performer, be mutually beneficial and fair. AxTrust sets a new level of transparency and security for the transaction.

With us, trust is an axiom!

Balanced and limited issue AxTrust is tied to people who have successfully completed their transactions on the platform. The TRU / ETH starting rate for emissions after the platform release will be fixed at the level of $1 \text{ TRU} = 0.0011 \text{ ETH}$. With the growth of the exchange rate, the emission rate will be adjusted for the market. In this way, the emission rate on the platform will not reduce the market value of AxTrust.

We will organize rules of treatment that will stimulate demand, thanks to unique services, services and privileges for users.

- "AxTrust approved" is an open environment, and TRU is a free currency. Any business can use AxTrust API as a convenient financial tool and attract a new, loyal, solvent audience to their projects;
- TRU is a freely available crypto currency, a convenient payment instrument on the safe transactions platform;
- Marketplace - an internal service platform that combines offers with goods and services, implemented for crypto currency;
- Marketplace - an internal service platform that combines offers with goods and services, implemented for crypto currency;
- Exchange - a tool that supports the liquidity of TRU.

Доверие - это аксиома

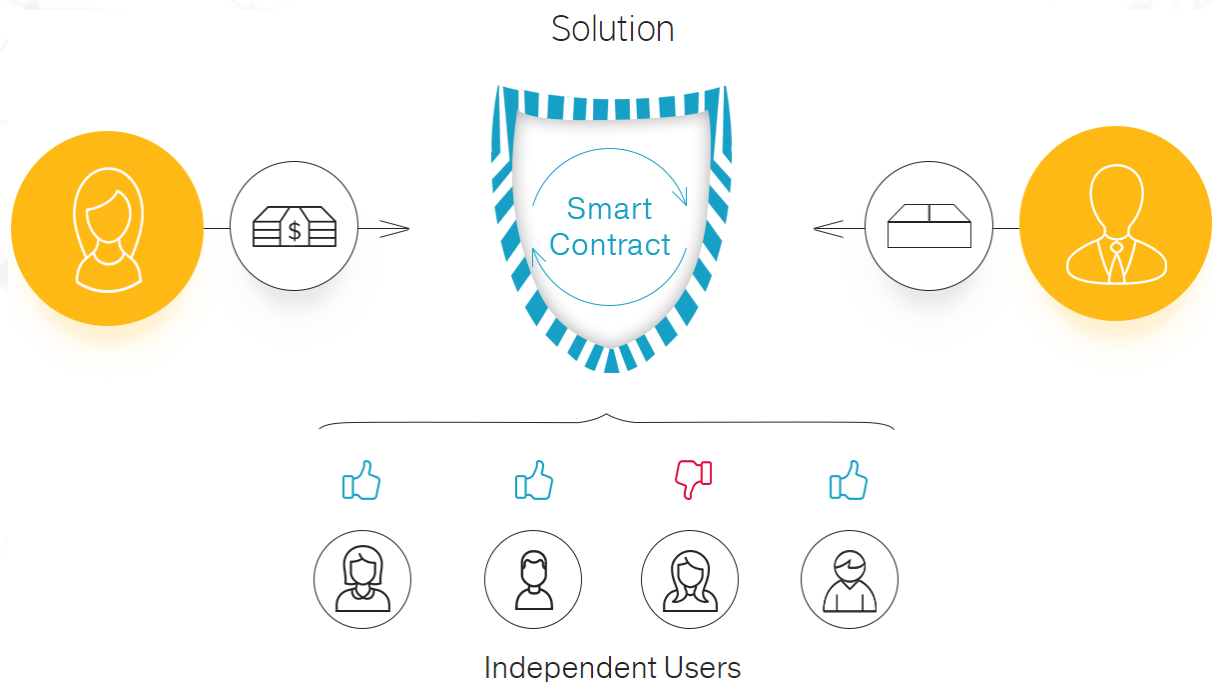

An important factor that stimulates the active use of the platform is a fair accounting system that reflects the rating of each user. Such a solution will allow to organize an even safer, efficient decentralized, self-regulating environment with the help of a motivation system, ratings and voting of participants.

The ability to participate in voting and get tokens for effective work will create an additional incentive for the ownership of TRU and support the platform.

The rating system will allow users to obtain additional information about the participants in the transaction. The AxTrust team develops its own system of ranking and quantifying the user's activity on the platform and beyond on the basis of existing experience and uses its own unique algorithms.

The reputational system allows participants in the system to assess the integrity of the user and decide on the interaction with him, this has a positive effect on the evolution of all components of the platform.

Visualization AxTrust

Axtrust

Доверие - это аксиома

Profit platform

The AxTrust platform will charge a commission of 1% *, but not less than 2 TRU * of the security transaction. This commission is to provide maintenance and development platform. For the convenience of users of the AxTrust platform, we will accept the following crypto-currencies for settlement on the site:

- ✓ TRU
- ✓ Bitcoin
- ✓ Litecoin
- ✓ Ethereum

In the initial implementation, automatic reception will only be available for the TRU and Ethereum cryptocurrency

Bitcoin and Litecoin crypto currencies will be accepted for some time in manual mode

Commission when calculating TRU on TRY 1% but not less than 2 TRU *

Commission when calculating on site third-party crypto currency: Bitcoin / Litecoin / Ethereum

Will be 5.3%

Доверие - это аксиома

Using TRU

An important part of AxTrust is the use of TRU for currency circulation and the creation of supply and demand mechanisms.

How can I use TRU in the platform ecosystem:

1. Participants in the transaction:

- payment of commission;
- international legal services;
- modernization of the smart contract under individual terms of the transaction;
- A place in the platform marketplace - different types of advertising special placement will be created among the blocks of conventional ads;
- inclusion of a special offer of sellers in the weekly newsletter;

2. Company

- Completely individual development of smart contracts for the subsequent integration of API into the project of the customer's company;
- Individual interface;
- international legal support;
- Advertising on the platform and in the mobile application.

With the development of the platform, we will expand the list of possibilities for using TRU.

Доверие - это аксиома

Growth Forecast TRU

The formation of a large number of projects using the AxTrust API is the basis for increasing the value of TRU. The more services, shops and other businesses payments through secure transactions, the more demand for TRU and the higher their liquidity. AxTrust builds its business model on the connection of projects, increasing their number and increasing the number of users of the platform. But not only this will positively affect the cost of TRU. Crypto-currencies are very sensitive to info-guides, and we understand this.

The launch of major projects on the platform will attract additional attention - this will positively influence the reputation of the platform, and the TRU course.

Successfully connected companies give us positive information lines: the project is getting ready for connection and the company started working with safe transactions. Each of these reasons supports not only the project itself, but also the platform, and with it the TRU.

We have formed a department that is focused on the strategic development of Axtrust. The development strategy is to connect existing large companies to Axtrust. We plan to connect the top players of different markets. Just a few large campaigns can at times increase the demand for TRU.

Доверие - это аксиома

Emission TRU

The initial TRU issue is limited to 800,000,000 TRU (+ founders pool) during the preICO and ICO campaigns. 30% of unsold TRU that were issued for sale during preICO and ICO will be frozen on a smart contract without the possibility of subsequent withdrawal or use (actually destroyed). The TRU emission is programmed with a smart-contract and will be implemented in the following order:

At the preICO stage, 96,000,000 TRU will be produced

At the ICO stage, 144,000,000 TRU

On the stage Hardcap 160.000.000 TRU

The team remuneration is 80.000.000 TRU

The remuneration fund is 40,000,000 TRU

Distribution of 800,000,000 TRU tokens

Axtrust

Доверие - это аксиома

Conclusion

- In March we launch a demo version of the platform, so you can evaluate the convenience and functionality of our product
- As early as June 2018, we will start working in beta mode, and in September 2018 we will release a platform where anyone can use a secure transaction.
- We know exactly what buyers and sellers, freelancers and customers need. And we make a convenient, useful functionality that will not lead the blockade into uselessness.
- We have one of the lowest commissions on the market.
- Unlike 99% of ICO-campaigns, we do not just create another crypto currency on an already crowded market. On the contrary, we are building an economy in which the TRU is a tool and a method, not the goal itself and not the basis of future profit.
- We will take into account all popular crypto-currencies for the convenience of absolutely any user of the platform.

Доверие - это аксиома

PLATFORM FUNCTIONAL

Members

Registration

All users must be registered on the platform in order to perform actions within the system. You can register by email or log in via Facebook, Google, Twitter.

User privacy

All personal user data is not available to other users working on the platform. This list includes: e-mail, purse IDs, as well as direct links to accounts on social networks, even if they are listed in the user's questionnaire. Users and moderators can see transactions made on the platform,

with limited personal information. Personal data is available to the buyer and seller only within a joint transaction, and they can be issued upon request.

Moderation

Moderation is carried out by the platform's employees, during the inspection moderators are required to verify the legality of the transaction.

The moderator has the right to request from users confirmation of personal data, as well as additional documents related to the subject matter of the transaction. The quality of the transaction.

Доверие - это аксиома

After the transaction is moderated, it becomes available for execution. The notification of the user about the passage of moderation is delivered by the chosen method: sms notification, push notification, delivery of notification to email is mandatory.

Transaction execution

A transaction on a platform can be considered completed only in the following cases:

1. If the buyer has checked the product or service provided and has no claims for quality or performance.

In the event that after some time after completion of the transaction, the buyer has found a defect or defect in the work of the contractor, he has the right to apply to the technical support of the platform for the formation of an official report on the terms and procedure for the transaction. The report is prepared on the official letterhead of the organization, certified by the signature of the head, the seal of the organization. This document is of international legal force and is subject to review as evidence of the transaction.

2. If the parties have a conflict and an independent arbitration AxTrust made its decision in favor of any of the participants in the transaction.

In the event that the arbitration decision of Axtrust does not suit one of the parties, users also have the right to request an official report on the transaction carried out on the platform for transmission to the appropriate authority.

Доверие - это аксиома

3. If the end time specified at the creation of the transaction is completed and none of the parties has responded to the platform notifications. In this case, the platform by default considers the terms of the transaction to be fulfilled and transfers funds from the smart contract to the seller (the executor).

Completed transactions are shown in the users' personal account and in the special section "Completed Transactions". Upon completion of the transaction, both parties have an opportunity to evaluate the transaction and its participants, thereby forming the rating of the users of the platform. Rating is displayed in the user profile.

EXAMPLES OF USE OF THE PLATFORM

Launching the transaction

General information

Platform AXTRUST is ideal for conducting transactions of any level (purchase of goods, payment for services, phased payment of large transactions, large financial purchases).

How does this happen:

1. The user registers on the platform and passes verification (in automatic mode).
2. He creates a smart contract and prescribes the terms of the transaction, which he agrees with the other party.
3. Then, if both sides reach an agreement, the moderation stage passes.

Доверие - это аксиома

4. 4. After passing the stage of moderation, the buyer credits the crypto currency to the smart contract.
5. 5. In turn, the seller / executor sees that the crypto currency has entered into a smart contract and can proceed with the fulfillment of the conditions stipulated in the smart contract.
6. 6. After the agreed conditions are met, the buyer must verify the quality of the conditions and confirm it on the site, thereby confirming that the terms of the smart contract are fulfilled and the crypto currency can be transferred to the contractor / seller.
7. 7. After confirmation by the buyer / customer of the fulfilled conditions, the crypto currency is transferred to the account of the contractor / seller indicated in the user's personal profile and verified by him.
8. 8. The completed transaction is stored in the archive in the personal cabinet of each user.

OTHERS

Prohibited types of transactions

On the platform, bargains are prohibited that are contrary to international law, as well as transactions that are contrary to the basics of morality, anti-religious and terrorist orientation. For example, such as:

- Narcotic substances;
- Smoking mixtures;
- Poaching tools and equipment;
- Weapons and means of self-defense;
- Smuggled goods, stolen property;

Axtrust

Доверие - это аксиома

- Counterfeit banknotes;
- Materials of pornographic content, information about services of a sexual nature;
- Information aimed at inciting hatred, enmity and violence;
- Vehicles without documents or wanted;
- Special technical means for removing information from communication channels and other means of secretly obtaining information;
- Illegally obtained private and confidential information;
- Information on dubious services and offers, fraudulent activities;
- Information on items of value to the state or third parties;
- Information on goods and services that can cause harm to health;
- Information on products and services that may harm software users;
- Databases with personal data;
- Information containing state, banking or commercial secrets;
- Materials infringing the copyrights of third parties, patent law; copies of sites or Internet pages, texts and images that are prohibited for copying by the original owners.

Доверие - это аксиома

DATA SHEET

Smart contracts

TRU are created on the basis of ETH ERC-20. At the moment we are working on a technical description and specification of smart contracts. Information about them will be added later.

Cash Security

The employees of the platform do not have access to personal data of users, including payment. The funds credited by users and located on their unique smart contracts are controlled by the platform in an automatic mode.

User Security

Access to payment data is only from their owners. Passwords to accounts are not stored on the site - for fast login is used hashing.

Links to user profiles in social networks, emails and other contact details are shown only to the owners of accounts and are not visible to other users, unless the user himself opens public access to this information.

Доверие - это аксиома

Only platform moderators and top developers have access to links to user profiles in social networks, as well as access to their contact information. Moderators do not have access to payment data of users, their identifiers or passwords.

All personal data of users, including passwords, emails and all identifiers of purses, are encrypted. This protects AxTrust users in cases of hacking or leaking information.

Confidentiality

Translations made by users are recorded in the system and encrypted. User wallets are also encrypted on the platform and any association with user profiles is maximized. Any connection of wallets with the users of the platform is not accessible to anyone except the AxTrust platform developers. This is necessary to resolve disputes or respond to user questions in case they arise.

ROAD MAP OF THE PROJECT

2017 – October

Formation of AxTrust team with competencies in the fields of cryptocurrencies, blockchain, smart contracts, marketing, and business experience

2017 – November

Preparation of the project for placement in the web

2017 – December

The concept of the platform AxTrust to conduct safe transactions in the cryptocurrency in the web

2018 – January

Conducting pre-sale and attracting start-up funds for ICO AxTrust

Доверие - это аксиома

2018 – February

Formation of whitelist members of ICO AxTrust with maximum discounts (up to 80% discount on TRU tokens in first 24 hours of ICO)

2018 – March

Conducting ICO AxTrust and attracting funds in cryptocurrencies to develop the product and create a marketplace of AxTrust

2018 – Summer

Creation of a global marketplace to purchase goods and services for crypto-currencies, and integration with smart contracts of AxTrust

2018 – Autumn

Partnerships with major global marketplaces for usage of AxTrust smart contracts as a way of payment

2018 – Winter

Launching of marketplace with AxTrust secure smart contracts in 170 countries

2018 – Year

Turnover of purchases and sales of goods and services through AxTrust marketplace is more than \$ 1,000,000,000 per month

2018 – Year

AxTrust - the world leader-marketplace for purchasing goods and services in exchange for cryptocurrencies using secure smart contracts

ICO

For ICO, we have developed a migration smart contract that allows investors to immediately get their tokens.

PRE-ICO Axtrust will be held from February 25 to March 25, 2018, on time PRE-ICO investors will be issued temporary AXTP tokens, which at the ICO stage will be replaced by official TRU tokens. This is done so that the investor in the personal cabinet can immediately see the history of operations and the number of their tokens.

Our ICO will be held from March 31 to April 30, 2018.

Hard cap: 20 000 Ethereum.

400,000,000 TRU will be sold during the ICO.

96,000,000 TRU will be sold during preICO.

The price is set at the rate of 1 Ethereum = 900 TRU.

In ICO, you can participate with both Ethereum and other popular crypto-currencies.

Funds collected during the ICO and preICO will be distributed as follows:

Доверие - это аксиома

Distribution of funds for the development of Axtrust

Marketing and promotion

Technical support

Operational costs

Long-term financial reserves of the company

TERMS AND CONDITIONS

- This document is intended for information purposes only and is not an offer or an invitation to buy AXTRUST platform tokens.

TRU are not securities

The User acknowledges, understands and agrees that TRU are not securities and are not registered in any public institution as collateral, and should not be treated as such. The user acknowledges, understands and agrees that, that the right of ownership to TRU does not grant the User the right to receive profit, income or other payments, or income associated with the acquisition, storage, management or disposal, execution, redemption or expiration of any right, interest, ownership rights or privileges on the AXTRUST platform or any other property of AXTRUST, in whole or in part.

Absence of guarantees of income or profit

There are no guarantees that the TRU token will increase in price. If this happens, then there is no guarantee that due to some unforeseen circumstances, or events that can not be controlled developers, or due to force majeure circumstances, the TRU rate will not decrease, including significantly.

Risks related to Ethereum

Доверие - это аксиома

TRU tokens released on the blockbuster of the Ethereum. In this regard, any malfunction or malfunctioning of the Ethereum protocol may result in the TRU's token trading network being operated in an unforeseen manner.

Regulatory uncertainty

Technologies related to blockage are subject to supervision and control by various regulatory bodies around the world. TRU tokens can be regulated by them, including restrictions on the use or possession of digital tokens, such as TRU, that can slow or limit functionality, or redemption of TRU tokens in the future.

TRU tokens are not an investment

TRU tokens are not some kind of formal or legally binding investment. Due to unforeseen circumstances, the objectives set forth in this document may be amended. Despite the fact that we intend to implement all the points set forth in this document, all persons and parties, involved in the purchase of TRU tokens do so at their own risk.

Risk of loss of funds

Funds from fundraising are not insured in any way. If they are lost or lose their value, there is no private or state insurance representative that buyers can contact.
